

Comprehensive consulting and services for taking your business to the cloud

We live in a time of transformation, where the accelerating rate of technological change is forcing businesses and organizations to reevaluate how they compete in the marketplace. Increasingly, the cloud is an essential tool for organizations that wish to remain competitive. It enables incredible new ways to connect and interact with your customers, partners, and employees.

Whether you're just beginning to consider what advantages the cloud might hold for your business – or you need help managing a complex cloud initiative – VF&T Cloud Solutions offers the resources necessary to answer your questions and streamline cloud deployment and management. We're a team

of vendor-agnostic cloud experts with years of consulting and implementation expertise, ready to help you through every step in your journey.

Simply lifting your applications to the cloud may not be enough. We know that a thorough understanding of your applications, your workloads, and how they drive your organizational process are all key to a successful cloud engagement. Throughout the engagement process we'll work closely with you to review and address your concerns around cloud security, performance, cost models and work to deliver a uniquely tailored solution to support your requirements and workloads.

Cloud Strategy Services

We understand the challenges that digital disruption is bringing to the market, and where traditional market strategies may no longer bear fruit.

Our team of consulting experts brings the right mix of business expertise and cloud know-how to help you build a roadmap for success.

Through an in-depth workshop our team will identify the key business drivers and internal processes that make sense for the cloud, and build a roadmap to get you there.

Cloud Assessment Services

Our team of technical experts has years of experience working with customers to assess cloud application compatibility on multiple dimensions such as cost, performance, security, architecture, compliance, and software and hardware compatibility.

During this process we'll ensure that each component of your application is cloud capable. At the end of this engagement we will provide a clear roadmap, timeline and cost to move your applications to the cloud, along with the necessary tools and infrastructure requirements to support this new model.

Cloud Optimization Services

We can provide a wide variety of services to help you optimize your cloud environment, assisting you in areas such as automation, security, compliance, Dev-Ops and application development.

Cloud Migration Services

Each migration requires hands-on technical expertise to ensure a flawless application migration. Our goal is to ensure a seamless, efficient, and cost-effective migration.

Our team follows a best-practices methodology to cover your full migration to the cloud. Our team of experts has extensive experience migrating business-critical applications to a wide-range of cloud development types. Our experts create a custom project plan that is specific to each client's specific needs and requirements.

Cloud Managed Services

Using a set of defined and well-tested processes and tools, our combination of onshore and offshore technical teams will manage your cloud infrastructure and support all of your requirements.

The VF&T managed services team will ensure that your cloud infrastructure, databases, and applications are designed, managed, and operated on a 24/7 basis, ensuring a highly available and secure environment for business transactions. They leverage IT Infrastructure Library (ITIL)-based best practices to provide services through integrated sets of processes and enabling technologies, and deliver a proven methodology supported by a strong program management office and a dedicated account management team.
